SKILLS

Languages: Python, SQL, TypeScript, JavaScript, Java, Kotlin, C++
Backend & APIs: REST APIs, FastAPI, Node.js, Express.js, WebSockets, OAuth, third-party API integrations
Databases & Infra: PostgreSQL, DuckDB, Redis, MongoDB, Docker, AWS, Linux, Git, CI/CD
Debugging & AI Tooling: log analysis, root-cause investigation, LLM pipelines, prompt engineering & evals

EXPERIENCE

- Prodigal Tech (Y Combinator S18)** July 2026 – Present
Agent Engineer Intern Mumbai, India
- Own voice AI agents end-to-end — debugging agent failures against real call data and driving fixes through tight prompt/eval iteration loops.
 - Build NLP + LLM pipelines for entity recognition, blending pattern-based rules with model-driven extraction.
 - Build internal tools and automations that cut manual QA work and measurably speed up how the team ships agents.
 - Partner directly with customers during onboarding across Prodigal's product suite, turning escalated feedback into shipped product improvements.
- National Informatics Centre (NIC), Ministry of Electronics & IT** June 2025 – August 2025
Data Engineering Intern New Delhi, India
- Engineered data pipelines handling **4 TB/day** across government-scale systems using Apache NiFi, Spark, Hudi, and Hadoop.
 - Cut incident-driven downtime by **35%** through proactive monitoring, alerting, and automated error recovery.
 - Improved ETL processing speed by **45%** by tracing bottlenecks to root cause and refactoring legacy transformation scripts.

PROJECTS

- Manthan** – Billing Ops Agent for B2B Chargebacks | *Python, FastAPI, DuckDB, PostgreSQL, Docker, AWS* manthan.quest
- Built an autonomous agent that resolves B2B chargeback disputes by reading Stripe, the CRM, product logs, and the support inbox in parallel — tracing each dispute to root cause and condensing the evidence into a one-click approval.
 - Unified all four systems behind one SQL surface, joining across them in single queries — no per-system connectors or ETL glue code; a correctness layer traces every number back to the query that produced it.
- NEXUS CDM** – Clinical Data Management Platform | *Next.js, FastAPI, PostgreSQL, Redis, Docker, WebSocket* GitHub
- Built a multi-agent clinical trial platform with a 9-component Data Quality Index and real-time KRI breach detection, compliant with ICH E6(R3) and 21 CFR Part 11.
 - Engineered a 6-role RBAC system with granular permission gating, append-only audit logging, and automated GO/NO-GO database-lock readiness assessment.
- AASO** – Automated Application Security Optimizer | *TypeScript, VS Code API, Node.js, Snyk, SonarQube* GitHub
- Created a VS Code extension that identifies and fixes vulnerabilities using Snyk, SonarQube, and AI-powered analysis; cut repetitive debugging effort by **30%** by automating recurring security checks.

ACHIEVEMENTS

- Track 1 Winner (Enterprise Agent)** — **Pirates of the Coral-Bean, WeMakeDevs × Coral (2026)**: won with Manthan among hundreds of submissions.
- 1st Place, SKALE Track** — **SF Agentic Commerce x402 (2026)**: PIXIE, an encrypted AI trading arena where ten autonomous agents execute real DEX swaps under end-to-end threshold encryption.
- Track Winner** — **DomainFi Challenge, DoraHacks (\$10K, 2025)**: AI-powered on-chain domain valuation and rarity analytics engine.
- Grand Finale Runner-Up** — **Novartis NEST 2.0 (5,000+ teams, 2026)**: NEXUS CDM, a 5-agent clinical data management platform.
- 3rd Place, Sustainability** — **Hedera Apex Hackathon (\$8K, 2026)**: Hestia, an on-chain wildfire-risk credit ledger on Hedera Guardian.
- Research Publication**: co-authored a paper on privacy preservation techniques in cloud computing.

EDUCATION

SRM Institute of Science and Technology 2023 – 2027
B.Tech in Computer Science and Engineering (Data Science Specialization) — CGPA: 9.15
Delhi NCR, India
